

16
stûv

A NEW RANGE OF COMPACT FIREPLACES FROM STÛV.

+++++ The Stûv 16

More powerful, cleaner, quieter and more elegant.

+++++ Insert or stove

It can be placed on a base, giving off much of its heat from its sides like a normal stove (stûv 16-cube).

It can be easily fitted into an existing hearth or into a brand new chimney, providing a highly-efficient form of additional heating (stûv 16).

+++++ Various options

The stove is designed to allow various types of connection in order to:

- obtain the air necessary for combustion from outside which avoids disturbing air circulation inside the house
- improve hot air circulation in the room keeping temperature constant,
- direct hot air towards adjacent rooms and/or to obtain cool air from them,
- ensure air is returned.

Stûv 16-cube

Stûv 16

+++++ The range

3 models: 58cm, 68cm and 78cm (width); They all have the same height (61cm) and the same depth (44cm).

+++++ Efficiency

It uses a sophisticated combustion technique resulting in extremely high efficiency (official figures are due to be released).

+++++ Frames and cladding

Various accessories are available to provide the perfect finish for your Stûv 16. Frames are available to conceal brickwork and to protect your wall against heat and dirt.

Cladding provides the ideal complement to the stove giving it extra presence. It also makes brickwork unnecessary. Thanks to its stylish appearance, it fits in beautifully with any interior. It is covered with a high-resistance finish, which is easy to clean.

- 1 The depth of the frame chosen can be adapted to fit the brickwork.
- 2 Frames are available in the material of your choice (here in stone).
- 3 The frame discreetly conceals the brickwork.
